### ABSTRACT

This discussion explores the relationship between informality and inequality of opportunity in Belgium, Italy, and Spain using EU-SILC 2023 data. Adopting a fairness-based approach, it compares inequality driven by circumstances beyond individual control between formal and informal workers. The findings show that inequality of opportunity is generally higher among informal workers, although results vary depending on the measurement method used. The session will be in English with automatic translation into English for those who need it.
